

Dominate the Battlespace

"Dominate the Battlespace" is a portrayal of a (probable) future military conflict that poses unique challenges to our military forces. In the scenario, decisions must be made quickly, and an error could cost lives and cripple further action to resolve the conflict.

SPAWAR Systems Center, San Diego took this scenario and demonstrated how a futuristic "Command Center of the Future" (CCOF) could be used to help the Joint Warfighter achieve information superiority.

VISION:

"To be the Nation's pre-eminent provider of integrated C4ISR solutions for warrior information dominance"

SPAWAR Engineering Duty Officers are making this vision a reality.

SPAWAR Systems Center, San Diego's vision is embodied in the Command Center of the Future and reflects an integrated system of information technology — incorporating existing C4ISR systems today, along with new systems and technologies of tomorrow — to provide the Joint Warfighter with the tools to reduce decision time, convert data into knowledge, and incorporate decision support systems to allow our Joint Forces to take the necessary offensive action at the right time, with the right strategy — to fight and win.

SPAWAR IS GLOBAL CONNECTIVITY AND INFORMATION DOMINANCE

A handwritten signature in black ink, appearing to read "Ernest L. Valdes".

**CAPT Ernest L. Valdes, USN
Commanding Officer
SPAWAR Systems Center, San Diego**
